

Objective

The strategy draws on the credit analysis and trading strengths of NIS's portfolio management team. The strategy's objective is to generate consistent returns with minimal duration risk. Our goal is to have positive returns more than 85% of the time on a monthly basis. We expect to have volatility that is equal to or less than a traditional bond strategy. Excess returns are sought by taking credit and convexity risk in corporate and municipal bonds as well as mortgages, CMBS and ABS debt securities. Short term trading profits and carry are the primary sources of return. Since interest carry is a primary contributor to return over time, it is anticipated that the long/short ratio will average 3 to 1 or less. Duration will average 1-2 years, with a typical range of 0-3 years. Short positions will be predominantly used to manage duration risk, vary yield curve risk and lock in short term relative value trading opportunities. The strategy will normally be long spread duration and will utilize U.S. Treasury futures to hedge rate risk and cash to hedge spread risk.

Components of Return

Sector Rotation

Sector rotation is focused on relative value analysis, short and long term supply trends and annual calendar trading opportunities. Our goal is to take advantage of overall spread tightening and widening by actively investing in a broad array of fixed income investments.

Security Selection

Security selection emphasizes credit analysis with a relative value overlay and is the primary driver of returns.

Yield Curve Arbitrage

Yield curve arbitrage is dominated by analysis of Federal Reserve activity and intermediate term economic trends.

Sector Distribution ⁽¹⁾

	Absolute Return	Bloomberg US Aggregate Index
Treasury	0%	46%
